

```
int redpin = 11; // select the input pin for the potentiometer
int bluepin =10; // select the pin for the LED
int yellowpin =9;
int val;

void setup() {
    pinMode(redpin, OUTPUT);
    pinMode(bluepin, OUTPUT);
    pinMode(yellowpin, OUTPUT);
    Serial.begin(9600);
}

void loop()
{
    for(val=255; val>0; val--)
    {
        analogWrite(11, val);
        analogWrite(10, 255-val);
        analogWrite(9, 128-val);
        delay(1);
    }
    for(val=0; val<255; val++)
    {
        analogWrite(11, val);
        analogWrite(10, 255-val);
        analogWrite(9, 128-val);
        delay(1);
    }
    Serial.println(val, DEC);
```

}
